Rubber mount, axle body (wheel suspension)

to fit

BMW E28, E24, E23

The driving comfort of cars is being continuously improved. Often with a compromise regarding the longevity of the component. A further example of this is the rubber mount of the listed BMW models. It is noticeable that less than half of the mount is actually filled with rubber and can absorb forces. Analysis of the worn out parts shows every time that failures are clearly caused by overloading.

The MEYLE rubber mount has the capacity to bear almost double the load. On the one hand, we have achieved this by using a higher quality rubber and on the other hand by intentionally reinforcing the part using more rubber.

This guarantees:
