Rubber mount

to fit

**Audi A4, A6, A8
Skoda Superb
VW Passat**

The outstanding feature of the four-link front axle of the VW Passat, the Audi A4, A6, A8 and the Skoda Superb is the neutral self-steering effect and minimum vulnerability to interfering forces from the road surface.

But the high repair frequency for this front axle indicates inadequate design rating. A focal weakness is the large hydro bushing in the rear bottom control arm. High dynamic loads on this bushing result in leaks of hydro fluid. Once a leak has occurred, the part will soon fail. This then becomes obvious through squeaking noises.

Here we have produced an effective remedy. The MEYLE rubber mount is made of solid rubber and thus aligned for multiple load on the mount. For this part too, we guarantee a long service life for constant ideal driving comfort.
