Strut mount

to fit

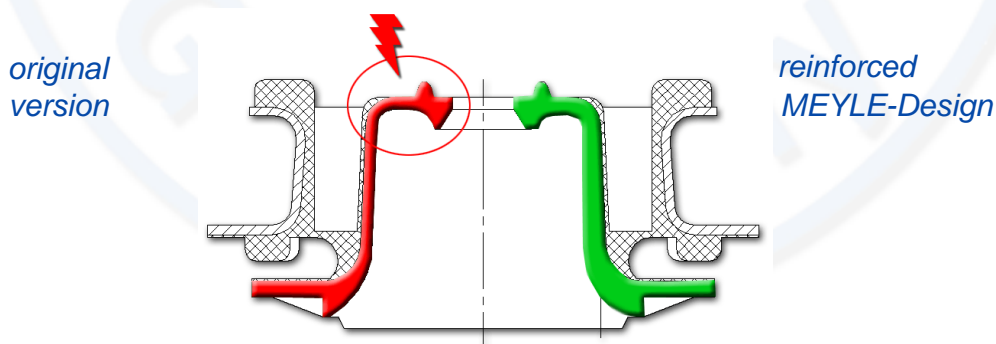

Mercedes W124/C124/S124

Exceeds OE Specifications
For information please check www.meyle.com or contact your sales person

The Mercedes E and C class W124/C124/S124 (1985-1997) are among the most sold DaimlerChrysler models. These vehicles are extremely popular all over the world, thanks to their long service life and good workmanship. Meanwhile, these models have frequently been running for many years, or operating in countries with poor road conditions. Under certain circumstances, the shock absorbers can be worn out. This has resulted in increased demand for a strengthened version of the strut mount in particular.

The weakness of this strut mount is the aluminium support for the piston rod. As a result of the forces applied by the shock absorber, the aluminium inside part of the bearing, shown in colour in the drawing, can break. Here we have made the aluminium wall 25% thicker for better absorption of these forces. At the same time, we use a better quality aluminium.

Test facility and installation checks have confirmed our approach here, verifying the greater load-bearing ability of the part.

This guarantees:
